GSS on Kubernetes

In the flyers, websites, and solution stories you do not read about the technical detail underneath this solution. Why should you? This stuff is complicated! Luckily, there are people who truly enjoy the technical details that can assist. Technicians are meticulous with respect to technical details but what about the organizational aspects of such a technology implementation. Is your organization ready?

This training aims to help Management level-oriented people to understand what organizational aspects need to change as a result of technical innovations. Talk the talk with the technicians to ask the right questions but more importantly, get the organization right for the technician to perform at their best.

In one half day, you will learn to talk the talk. Know what organizational changes to plan for upgrading to the newest version of GSS (Geo Spatial Server by GE Smallworld).

GE Smallworld

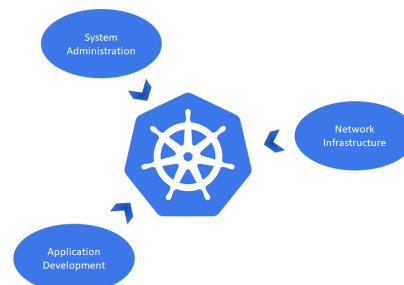

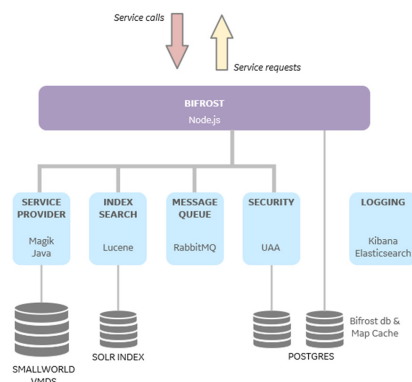

GE Digital selected Kubernetes to implement their solution for web technology. A good and logical choice from a technical perspective. From Smallworld version CST 5.2 upwards, you need to implement Kubernetes for your web API services. Be aware Kubernetes is not just an application! It is a network infrastructure, a system administration environment and an application development environment all at once. Lacking proper organizational foundation is a recipe to fail.

Organizational readiness

Is your organization ready for implementing and using the new Kubernetes infrastructure? Do you know what to change?

It is not that you can choose to use Kubernetes: It is a must!

Smallworld GeoSpatial Server (GSS) is built on Kubernetes from version 5.2 onwards. It may feel like you are forced into doing something you may not want to do just yet. Nevertheless, the future is here and there truly are benefits. This is your opportunity to acclimatize.

Training

Realworld understands that organizations may not be ready for such a change and therefore created a training program for management level people to learn in half a day to speak the language of Kubernetes.

During the training you will learn the basic concepts. The organizational changes that need to take effect. With this knowledge, you start embedding Kubernetes within your organization where the right responsibilities are allocated to the right process owners.

The training is conducted via MS Teams during normal business hours based on CET (Europe) time zone. Interested parties may request a suitable timeslot. The duration is about 4 hours.

The price for the training is € 1000 per attendee. Preferable group size is 3 to 5 persons, contact us for details.

Contact Realworld for a training appointment, more details, or questions:
