

Hands On Training

Monitoring Kubernetes

Kubernetes is the new infrastructure used for Web services on Small-world. No worries! Hands on training is available from Q4 2023 onwards!

In three days of training we will cover the basics of Kubernetes. Implement EO Web in you personal cluster. You will learn about configuration of GSS. Finally your are in a position to customize GSS.

Day 1: Docker, create image, spin container, Kubernetes and resources

Day 2: Smallworld GSS, components in architecture, deploy, certificates

Day 3: Configure and customize GSS. Add a third party application

We will also touch Prometheus monitoring on the cluster with Grafana.

We will work with security certificates and explain the need for this.

Next security item, working with tokens from an OpenID identity provider.

At the conclusion of the course your knowledge about Kubernetes and how to debug and deploy your application is clear.

Focus on the essentials!

Focus on your role as application maintainer/developer!

Delegate work that is not your responsibility!
